EKM electrical enclosure application examples

The EKM Series General purpose electrical enclosures are used to house and protect various types of electrical equipment, such as circuit breakers, power supplies, transformers, switches, and other control devices.

These enclosures are designed to protect against external elements such as dust, moisture, and physical damage.

General purpose electrical enclosures can be used in a variety of applications across different industries, including:

- 1. Industrial Automation:** EKM steel electrical enclosures are used to protect control devices, PLCs, and other electrical equipment from harsh industrial environments such as chemical plants, oil refineries, and power generation facilities.
- 2. Telecommunications:** EKM steel electrical enclosures are used to house network equipment, including routers, switches, and modems, and to protect them from environmental factors.
- 3. Transportation:** EKM steel electrical enclosures are used in transportation systems such as rail, automotive, and aviation, to protect electrical equipment from dust, moisture, and other external elements.
- 4. Building Automation:** EKM steel electrical enclosures are used in building automation systems to protect control equipment, including thermostats, security systems, and lighting controls.
- 5. Renewable Energy:** EKM steel electrical enclosures are used to protect inverters, transformers, and other electrical components used in solar and wind energy systems.
- 6. + much more...**

In summary, the EKM General Purpose electrical enclosures are essential components in a wide range of industries and applications, providing protection and security for sensitive electrical equipment.

Maintenance Recommendations

IEC 62208 is the international standard for metallic enclosures that are to be installed outdoors.

Standard IEC 62208 allows for a degree of rusting Ri1, in accordance with ISO 4628-3, and although in practice this degree of rusting does not affect the function or mechanical solidity of the enclosure, maintenance to avoid its aesthetic deterioration and to prolong its useful life is recommended.

- **Frequency:** Annual.
- **Visual inspection:** Detection of any harm to the surface such as scrapes or impacts that could have damaged the paint coating.
- **Initial sign of rust:** Due to scrapes, impacts or any other causes.
 - > Remove the surface rust.
 - > Abrade the rust to get rid of it completely.
- **Cleaning:** Clean the affected area with alcohol or an evaporating cleaner- **Paint:** Paint the affected surface with a synthetic paint.
